

THERMEQ

ELECTRICAL HEATING ELEMENT BUNGS

Left - An exposed coil, electrical heating element bung manufactured by another company.

Right - Module which contains many individual U-shaped tubular style heating elements.

Left - Enclosed insulated bungs preventing insulation particles from entering the process chamber.

THERMEQ

ELECTRICAL HEATING ELEMENT BUNGS

Feature / Benefits

- **Stainless Steel Bung** - Each THERMEQ element bung is constructed of stainless steel to ensure long life under high temperature conditions.
- **Sealed Bung** - Each element bung is insulated and continuously welded to ensure that the insulation can not infiltrate the oven system.
- **Sheathed Elements** - Each element is contained inside a sheath which protects it from the harsh oven environments. This type of element is electrically neutral on the outside surface. The element will not short out when it comes into contact with other metals.
- **Single Element Bungs** - This type of bung enables the heat source to be spread over a wide distance. It also allows for easy replacement of an individual element without disturbing the process.
- **Multiple Element Bungs** - This type of bung enables the user to put a high capacity unit in a concentrated location.
- **Individually Fused** - THERMEQ fuses each individual element, whether it is on a single element bung or multiple element bung. This system prevents a single element failure from shutting down an entire zone.
- **Controls** - Depending on the needs of the customer, THERMEQ can provide proportional SCR controls or on/off contactor controls.

THERMEQ GROUP is an engineering and fabrication organization that serves industry by offering our customers technology, equipment, and service. **THERMEQ GROUP** has a capable staff of engineers and craftsmen that have both technical knowledge and practical field experience. **THERMEQ GROUP** provides our customers with high quality equipment, fast delivery, and trained technicians.
